

Express.js To-Do List API Task

Objective

Create an Express.js API for a simple To-Do List application. Your API should allow users to add, view, update, and delete to-do items.

Requirements

- **Initialize a Node.js Project:** Set up a new Node.js project with Express.
- **To-Do List Data Structure:** Use an in-memory array to store to-do items with each having an `id` and `description`.
- **API Endpoints:**
 - **GET /todos:** Return all to-do items.
 - **POST /todos:** Add a new to-do item. Accept `description` in the request body.
 - **PUT /todos/:id:** Update an existing to-do item's `description` by `id`.
 - **DELETE /todos/:id:** Delete a to-do item by `id`.
- **Test Your API:** Use tools like Postman or cURL for testing all endpoints.
